

SHAIK NASEER JOHN AHMED

Backend & Systems Engineer | Distributed Architectures & High-Concurrency Systems

Hyderabad, India | feznaseer777@gmail.com | github.com/Naseer-fez | linkedin.com/in/shaik-naseer-633010323

EXECUTIVE SUMMARY

Backend and systems developer specializing in Python, high-throughput streaming I/O, concurrency control, and database architecture. Creator of open-source packages on PyPI, robust WSGI backends, and low-latency data pipelines with expertise in WAL-mode SQLite, PostgreSQL concurrency, and scalable systems engineering.

EDUCATION

Vignana Bharathi Institute of Technology (VBIT) 2024 -- 2028 (Expected)

Bachelor of Technology (B.Tech) in Computer Science and Business Systems (CSBS) -- Hyderabad, India

- Core Focus: Systems Programming, Operating Systems, Database Management, Data Structures & Distributed Algorithms.

TECHNICAL SKILLS MATRIX

Languages & Core:	Python, SQL (PostgreSQL, MySQL, SQLite), C, C++, JavaScript, TypeScript, HTML5, CSS3, Shell
Backend & Frameworks:	Flask, Flask-JWT-Extended, SQLAlchemy ORM, Gunicorn, Waitress WSGI, stream-zip, rapidfuzz, NumPy
Storage & Databases:	PostgreSQL, MySQL, SQLite (WAL Mode), In-Memory Caching, Reentrant Locking, Dirty-Flag Invalidation
DevOps & Cloud:	Docker Containerization, Linux CLI, Git, GitHub Actions CI/CD, Cloudflare Tunnel, PyPI Publishing

EXPERIENCE & LEADERSHIP

Helping Hands NGO & Departmental Coding Club -- VBIT 2024 -- Present

General Secretary & Technical Lead

- Architected and deployed student database management systems and automated digital registration portals.
- Conducted code review sessions and mentored junior developers in Python algorithms and clean code practices.
- Spearheaded technical events, charity hackathons, and departmental coding symposiums across the institute.

Open-Source Software & Python Package Maintainer 2024 -- Present

Independent Developer & Publisher

- Published and actively maintaining open-source tools on the official Python Package Index (PyPI).
- Engineered automated packaging pipelines with PyPA build, Twine validation, and GitHub Actions CI matrix.

FEATURED TECHNICAL PROJECTS

PyPackGen -- Automated PyPI Scaffolding Engine

[Python, Packaging CLI, PyPI API, AST]

- Architected CLI scaffolding utility automating compliant Python packaging structures, LICENSE/pyproject.toml generation, and PyPI release workflows w

OmniTrack -- Concurrency-Safe Asset Logistics Platform

[Flask, SQLAlchemy, SQLite WAL, HTML5]

- Engineered a multi-tenant inventory & asset management engine featuring optimistic locking, transactional audit journals, and automated reconciliation u

ZipFlow -- High-Throughput Chunked Streaming Archive Engine

[Python, stream-zip, Generator I/O]

- Developed a low-memory ZIP archive streaming engine capable of assembling and piping multi-gigabyte archives on-the-fly with constant O(1) memory

PyFaker -- High-Throughput Synthetic Data Generation Tool

[Python, RegEx, Synthetic Data Gen]

- Built a high-performance mock dataset generator capable of producing millions of structured records per minute for backend load testing and benchmark
